

Allpresan®

We change
the dispensers,
the quality stays
the same!

LESS plastic –
MORE product!

How the new dispenser works

When the dispenser head is pressed,
a small amount of the footbath
concentrate is transported outwards.
A vacuum is created between the inner
bag and the dispenser bag, which
causes the inner bag to contract.
No air reaches the concentrate!

Less plastic, more product!

Very dry skin on the feet requires additional
care. Foot baths can play an important
role here, as well cared for feet are more
resistant to bacterial infections
and athlete's foot.

The foot bath concentrate with 10 % urea
and aloe vera is specially tailored to the
needs of very dry skin. It gently cleanses
and cares for the skin on the feet. The skin
is gently moisturized. Calluses, calluses
and corns are easier to remove.
